190 then I activate keygen. From then on, everytime that I run the game and I want to go into the arcade mode, the game crashes with the following error. It says "Out of memory, please increase video memory". I tried to increase the video memory, but it didn't help. Does anyone has a solution for this problem? This is the error: D3D11 ERROR (EXCEPTION): [SDMIF] Invalid memory address (3ddraw.dll) A: I was having the same problem, and I got it to work. Here is what I did: I ran the game with dxdiag, and look for the two following parameters: D3D11_BUFFER_DESC.ByteWidth (the size of one pixel) D3D11_BUFFER_DESC.ArraySize (how many pixels there are) I changed the first one to something like 1 million, and the second one to something like 7 million. After that, I got rid of the out-of-memory problem. This will surely make you lose a lot of performance, though. Hope this helps you, -Tobias FILED NOT FOR PUBLICATION NOV 19 2012 MOLLY C. DWYER, CLERK UNITED STATES COURT OF AP 82157476af
